

Ergonomically designed in recycled LDPE plastic, it will not rust or deteriorate

Clear signage in text and icons

Centre panel can be customised with your own corporate identity

Built-in crane lift and release mechanism

The deposit chute is a one piece plastic mould with no moving parts

Hinged base allows for quick and easy emptying

### Design

- Pleasing modern design for today's streets
- Signage is informative simple and both pictorial and textual
- LDPE recycled plastic construction will not rust or deteriorate
- All operations are tested and certificated
- No doors to invite pilfering
- Graffiti cote system allows easy removal of ink and paint graffiti

### Safety

- All banks are fire resistant coated with auto fire extinguisher mounted internally
- Smooth ergonomics provide clean safe surfaces with no sharp edges
- No moving parts to harm the public

### Operation

- Drivers are all uniformed with mobile phone contact
- Crane operation provides fast service times
- On board weighing provides bank by bank information in kgs

### Service contract

- Banks are provided free of charge
- Payment for material is by BACS transfer to either charity or local authority
- All maintenance / service / operation is free of charge.

## A revolution in textile bank recycling

Modern handling, design and safety pressures have demanded a new style of textile bank for the 21st century. Ergonomically designed for the modern world of recycling, our innovative new textile bank is the answer to a 15 year old problem..

### The problem...

The old style of textile bank has been around for almost 15 years and the design has not changed much. Indeed, much of the hardware to be found on our local recycling sites and supermarket car parks are re-painted and repaired versions of this original equipment.

- 15 year old box shape design
- Metal construction is rusty and heavy
- Door at the front invites pilfering
- Hinged deposit chute has moving parts that cause trap hazards and injuries
- Emptying operation is by hand, time consuming and costly
- Risk assessment for operation is poor.

### ...the answer

Ergonomically designed, our new bank is made from recycled LDPE plastic (made from old plastic bottles). The average amount of textiles that can be collected per bank per week is about 200 kgs.

The old bank takes about half an hour to be emptied by hand into a sack and then put onto the lorry. The new bank can be emptied in 4 minutes with the innovative opening base and crane system.
